

The graph displays the training loss for Model 0 and the ensemble data loss. The x-axis represents the number of epochs, ranging from 0 to 2000. The y-axis represents the loss, with a horizontal grid line at 0.00. The 'Model 0 loss curve' is a highly oscillatory blue line that remains near the 0.00 level throughout the training. The 'Ensemble data loss' is a blue line with circular markers at epochs 500, 1000, 1500, and 2000, showing a sharp decrease from approximately 0.005 to 0.000.

Epoch	Model 0 loss curve	Ensemble data loss
0	~0.005	-
500	~0.005	~0.005
1000	~0.005	~0.004
1500	~0.005	~0.001
2000	~0.005	~0.000

Figure 1 is a line plot showing the training loss of the proposed method across 2050 epochs. The y-axis represents the Loss, ranging from -0.25 to 0.15. The x-axis represents the Epoch (cumulative), ranging from 0 to 2050. The plot compares the performance of three models (M1, M2, M3) under three different settings: dual, data, and ensemble (ens). The legend indicates the following series:

- M1 dual (solid blue line)
- M1 data (dashed blue line)
- M1 ens (dotted blue line)
- M2 dual (solid green line)
- M2 data (dashed green line)
- M2 ens (dotted green line)
- M3 dual (solid yellow-green line)

Key observations from the plot:

- M1 dual and M1 data:** Both converge to a loss of approximately 0.035 by epoch 600 and remain stable.
- M1 ens:** Converges to a loss of 0 by epoch 600 and remains stable.
- M2 dual and M2 data:** Both converge to a loss of approximately 0.01 by epoch 1100 and remain stable.
- M2 ens:** Converges to a loss of approximately -0.21 by epoch 1100 and remains stable.
- M3 dual:** Converges to a loss of approximately -0.02 by epoch 1600 and remains stable.

Vertical dotted lines are drawn at epoch 1050 and epoch 1530, indicating specific points of interest in the training process.
