

The graph illustrates the performance of two models over 4000 epochs. The x-axis represents the number of epochs, and the y-axis represents the loss. The 'Model 0 loss curve' shows high initial variance and a plateau around 0.05-0.06. The 'Ensemble data loss' shows a more consistent and significant decrease in loss over time, starting from epoch 500.

| Epoch | Model 0 loss curve | Ensemble data loss |
|-------|--------------------|--------------------|
| 0     | ~0.08              | -                  |
| 500   | ~0.055             | ~0.055             |
| 1000  | ~0.055             | ~0.055             |
| 1500  | ~0.055             | ~0.055             |
| 2000  | ~0.055             | ~0.045             |
| 2500  | ~0.055             | ~0.035             |
| 3000  | ~0.055             | ~0.025             |
| 3500  | ~0.055             | ~0.022             |
| 4000  | ~0.055             | ~0.02              |
