

The graph illustrates the performance of two models over 4000 epochs. The 'Model 0 loss curve' shows high volatility and a plateau at a high loss level. In contrast, the 'Ensemble data loss' shows a consistent and significant reduction in loss over time, starting from a lower initial value than Model 0's plateau.

Epoch	Model 0 loss curve (approx. relative loss)	Ensemble data loss (approx. relative loss)
0	High (near top of grid)	-
400	High (near top of grid)	High (near top of grid)
800	High (near top of grid)	Medium-High
1200	High (near top of grid)	Medium
1600	High (near top of grid)	Low-Medium
2000	High (near top of grid)	Low
2400	High (near top of grid)	Lower
2800	High (near top of grid)	Lowest
3200	High (near top of grid)	Very Low
3600	High (near top of grid)	Lowest
4000	High (near top of grid)	Lowest
