

The graph illustrates the performance of a model (Model 0) and an ensemble of models over 4000 epochs. The x-axis represents the number of epochs, ranging from 0 to 4000. The y-axis represents the loss, though it is not explicitly labeled. The legend identifies two data series: 'Model 0 loss curve' and 'Ensemble data loss'.

The 'Model 0 loss curve' is represented by a solid blue line. It shows a highly volatile and noisy loss curve, starting at a high loss level and remaining relatively stable but with significant fluctuations throughout the training process.

The 'Ensemble data loss' is represented by a blue line with circular markers. This curve starts at epoch 400 with a high loss, then decreases sharply, reaching a much lower loss level by epoch 2000. After epoch 2000, the loss continues to decrease slightly but remains stable, indicating that the ensemble method achieves a significantly lower and more stable loss compared to Model 0.

Epoch	Model 0 loss curve (approx.)	Ensemble data loss (approx.)
0	High (noisy)	-
400	High (noisy)	High
800	High (noisy)	Medium-High
1200	High (noisy)	Medium
1600	High (noisy)	Medium-Low
2000	High (noisy)	Low
2400	High (noisy)	Low
2800	High (noisy)	Low
3200	High (noisy)	Low
3600	High (noisy)	Low
4000	High (noisy)	Low
