

The graph illustrates the performance of three different loss functions over 4000 epochs. The baseline loss curve remains relatively stable and noisy, fluctuating between approximately 0.05 and 0.09. The Model 0 loss curve shows a steady decrease from 0.07 to 0.00 by epoch 3600. The Ensemble data loss curve also shows a steady decrease, reaching 0.00 by epoch 3600 and remaining there until epoch 4000.

Epoch	Baseline loss curve	Model 0 loss curve	Ensemble data loss
0	0.07	0.07	0.07
500	0.07	0.06	0.06
1000	0.07	0.05	0.05
1500	0.07	0.04	0.04
2000	0.07	0.03	0.03
2500	0.07	0.02	0.02
3000	0.07	0.01	0.01
3500	0.07	0.00	0.00
4000	0.07	0.00	0.00

Figure 1 is a line plot showing the training loss of the proposed model across different epochs. The x-axis represents 'Epoch (cumulative)' from 0 to 4000, and the y-axis represents 'Loss' from -0.10 to 0.10. The plot displays the training loss for five models (M1, M2, M3, M4, and M9) under three different conditions: dual, data, and ensemble (ens). The dual and data variants show a step-wise increase in loss, while the ensemble variants remain near zero. Vertical dotted lines indicate the epochs where new models are introduced.

Epoch (cumulative)	M1 dual	M1 data	M1 ens	M2 dual	M2 data	M2 ens	M3 dual	M3 data	M3 ens	M4 dual	M4 data	M4 ens	M9 dual	M9 data	M9 ens
